

# Blooming Mushroom

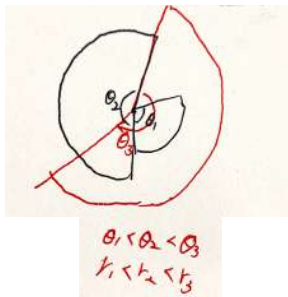

20201030 KwonBomi

## 🤔 Motive

In my traveling, I found mushrooms on a tree. The tree is very unique because of the unique pattern of mushrooms. I think of the pattern I watched before and decide to express that scene to processing in this project.

## ✍️ Process

1. Draw lines at the same starting point with a 30~32 size of radius, following  $\pi \sim 2\pi$  angle of arc.
2. Next, draw smaller lines next to earlier line, with another angle and smaller size of radius.
3. And also make a smaller lines arc than before, and repeat this implement until the hierarchy is made.

The process of repeated drawing lines with a certain angles makes the shape of one mushroom. When One mushroom is completed, on another sight, a part of the mushroom will be started to emerge.
